

The invention claimed is:

- 1 1. A method for determining communication rates, comprising the steps of:
2 identifying a set of possible communication rates based on an amount of transmit power available
3 for communications; and
4 identifying a communication rate based on a received signal quality.

- 1 2. A method for determining communication rates, comprising the steps of:
2 identifying a set of possible communication rates based on a number of available
3 communication channels; and
4 identifying a communication rate based on a received signal quality.
 c/I

- 1 3. The method of claim 2, wherein the communication channels are defined by Walsh
2 codes.

- 1 4. A method for determining communication rates, comprising the steps of:
2 identifying a set of possible communication rates based on an amount of transmit power
3 available for communications and a number of available communication channels; and
4 identifying a communication rate based on a received signal quality.

- 1 5. The method of claim 4 wherein the communication channels are defined by Walsh
2 codes.
